[Date]

Dear Hiring Manager,

I'm excited to apply for the **[Job Title]** position at **[Company Name]**. Your team's focus on reliable service, strong customer experiences, and thoughtful support immediately stood out to me. I'm a customer support and technology professional with six years of experience in customer-facing, analytical, and detail-driven roles, and I'm currently building toward support-focused technology work where communication, issue resolution, documentation, and product learning all matter.

In my previous roles, I developed the habits I believe make support work successful: patience, steady focus, clear communication, and follow-through. At Walgreens, I supported customers in a fast-paced environment, helped maintain smooth service during high-volume hours, and contributed to conversations around improving customer satisfaction. As a lab monitor at UNC Greensboro, I provided front-line support to students in a shared academic space. In my current remote role with TELUS Digital, I evaluate AI-generated responses and search results for clarity, quality, and alignment with user intent, strengthening my attention to detail, written judgment, and ability to follow complex standards independently.

I'm drawn to **[Company Name]** because of the opportunity to support customers while continuing to grow in a technical environment. I would bring adaptability, careful documentation, calm communication, issue ownership, and a genuine willingness to learn your tools and processes well. I care about helping people feel heard, informed, and confident when working through a problem, and I would be grateful for the opportunity to bring that approach to your team.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my customer support background, technical training, and steady learning mindset could contribute to **[Company Name]**.

Sincerely,
Taylor Bryant
